Back-end Process
Info

Automated Ingestion

- Connected Power Query to a dedicated local folder.
- Simply drop new monthly Excel files into the folder and click Refresh to auto-update all pages.

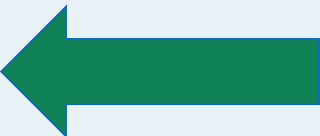

Data Cleaning & Transformation (ETL)

- Merged Employee Data 1 and Employee Data 2 into a single Master Sheet.
- Transformed Seat fill Target Headcount from a matrix table into a clean flat table.
- Replaced null values in Branch/Team and Salary Grade with "Unassigned".
- Added Work Level (1ABC vs 1D+) and Trade Type (GT vs Non-GT) rules.

Star Schema Data Modeling

- Built lookup tables (Dim_Branch, Dim_WorkLevel, Calendar).
- Linked Dimensions to Fact tables (Master Sheet & Target Headcount) using 1-to-Many single-direction filters.

Centralized DAX Calculation Engine

- Stored all formulas inside a dedicated _All Measures table.
- Used DIVIDE([Active Employees], [Budgeted Headcount], 0) to prevent division-by-zero errors across dynamic slicers.
